

ARPIT JAISWAL

Full-Stack Builder | Finance Operations | AI & Automation

Surat, Gujarat, India | +91 96249 97427 | jaiswalarpit428@gmail.com

linkedin.com/in/Arpit-Jaiswal9974 | github.com/Arpitj9974

SUMMARY

Four years in finance operations at JD Finance, running the complete lending operation and building the Excel data infrastructure the team still runs on. Since 2025, eight products designed and deployed across EdTech, AgriTech, FinTech, HealthTech and retail. I build using AI IDE agents: I own the problem definition, the architecture and the trade-offs; the agent handles the keystrokes.

EXPERIENCE

Finance Operations Lead & Systems Builder

JD Finance | Surat, Gujarat | Aug 2021 - Jun 2024 (Full-time, On-site) | Apr 2025 - Present (Part-time, Hybrid)

- Ran the complete lending operation end to end: loan disbursement, daily repayment tracking and borrower account portfolios across the full lifecycle.
- Designed and built the team's Excel data infrastructure from scratch; it remains the system operations runs on today.
- Returned in 2025 to lead the same function, introducing automation tooling and data workflows into a process that had been entirely manual.
- **Skills:** Process Automation, Business Operations, Decision-Making & Analysis, Advanced Excel, Google Apps Script

Product Development Lead (Internship)

Work Sarthi | Surat, Gujarat | Jan 2026 - Mar 2026

- Worked directly under the Founder & CEO to conceive, coordinate and deliver three products end to end.
- Led the AI Career Assessment platform: a psychometric engine combining RIASEC, Big Five and Hofstede frameworks into one scoring system, producing a personalised career report across 20 career clusters in 13 Indian languages.
- Delivered Career Library, a 225-career exploration platform for Class 11-12 students, with AI-evaluated fit analysis from an uploaded marksheet.
- **Skills:** Product Coordination, Google Apps Script, AI Integration, Prompt Engineering

Product Developer - AI & Automation (Internship)

CripcoCode Technologies Pvt Ltd | Surat, Gujarat | Remote | Nov 2025 - Jan 2026

- Built and deployed Medicine Image Extraction: an AI application turning a photo of pharmaceutical packaging into a structured database record, replacing manual transcription for pharmacists and stockists.
- Architected it as three independent services so the extraction pipeline keeps running even when the database is unavailable.
- **Skills:** Gemini AI, AI Automation, System Design, API Integration

SELECTED PROJECTS

Study Tracker AJ | EdTech, Live | study-tracker-aj.vercel.app | [GitHub](#)

Exam preparation tracking across 27 competitive exams, for aspirants who kept losing track of what to study next. Progress syncs to the cloud automatically across devices. A recommendation engine reads live completion data and surfaces what to study next based on exam priority and weakest areas.

Built with: Vanilla JavaScript, Firebase Auth, Firestore

FreshStamp | Retail / AI Vision, Live | fresh-stamp.vercel.app | [GitHub](#)

Expiry tracking for shopkeepers. Gemini Vision reads the date, brand, price and category straight off the packaging in one shot, so nothing gets typed. FIFO batch detection flags which stock to move first; waste analytics show exactly how much money expired and where. Works fully offline as a guest, syncs to cloud on sign-in.

Built with: React, TypeScript, Firebase, Gemini Vision, Vercel Serverless

RAW | Android / HR Operations, deployed at ARWS | [GitHub](#)

HR staff were spending 30-60 minutes a day typing call logs into a spreadsheet. RAW captures each call in the background, filters it by the company SIM, and pushes it to a Google Sheet in real time; personal SIM calls never leave the phone. Offline-first, with a four-layer duplicate-prevention system. The entire backend is a 133-line Google Apps Script: zero hosting cost, because the client had no infrastructure and no budget.

Built with: Kotlin, Room, WorkManager, Google Apps Script, Google Sheets

FarmerConnect | AgriTech Marketplace, Live | [farmer-connect-ai.vercel.app](#) | [GitHub](#)

Indian farmers lose 30-40% of a crop's sale price to middlemen; FarmerConnect lets them sell direct. Fixed-price and live-auction selling, with a bidding engine using database row locking so two simultaneous bids cannot both win. Live mandi prices from the government data.gov.in API. An embedded AI assistant answers MSP, crop-disease and scheme questions, routing across three providers so it never goes dark. Razorpay payments, three user roles, English/Hindi/Gujarati.

Built with: React, Node.js, PostgreSQL, Gemini, Groq, OpenRouter, Razorpay, Supabase

Work Sarthi Career Platform | EdTech, Live, two products | [work-sarthi.vercel.app](#) | [career-library-worksarthi.vercel.app](#) | [GitHub](#)

AI Career Assessment: a psychometric engine turning 60+ data points into a personalised career report, combining RIASEC, Big Five and Hofstede into one normalised scoring system, then running four parallel AI calls to produce an 8-10 page report with SWOT analysis and a roadmap, written in the student's own language across 13 Indian languages. Career Library: 225 careers across 14 industries mapped to entrance exams, colleges, eligibility rules and required traits, with AI fit analysis from an uploaded marksheet. Both fully client-side; student data never leaves the browser.

Built with: React, Vanilla JavaScript, Gemini, Claude API, Recharts, jsPDF, i18next

SKILLS

What I do

Project & Product: Project coordination, Requirement gathering, Scope definition, Stakeholder communication, Product roadmapping, Documentation & technical specs, Delivery ownership

Systems & Process: Business process analysis, Process automation, Workflow design, Systems design, Data infrastructure, Requirements-to-architecture translation

Data & Analysis: SQL, Python, Power BI, Tableau, Advanced Excel, Decision-making & analysis, Reporting

Automation: n8n, Make, Google Apps Script, SheetDB, API integration

AI Orchestration: Prompt engineering, Structured output design, Multi-provider AI routing, AI IDE agents (Antigravity), Google Gemini, Claude, Groq, NotebookLM

Domain: Finance operations, Lending operations, EdTech, AgriTech, Retail

Tech I build with

React, TypeScript, Node.js, Express, PostgreSQL, MongoDB, Firebase, Supabase, Kotlin (Android), Python (FastAPI), Tailwind CSS, Vite, Git, Vercel, Render, Railway

EDUCATION

MBA - Analytics & Data Science + Project Management (dual specialisation)

Manipal University Jaipur | 2026 - 2028

BCA - Bachelor of Computer Applications

Bhagwan Mahavir University, Surat | 2023 - 2026

CERTIFICATIONS

- **Google Prompting Essentials Specialization** | Google | Aug 2025 | Credential ID NFF6BEFXNP9X
- **Mastering Data Structures and Algorithms in C and C++** | Udemy | Oct 2025
- **Java Programming - Beginner to Master** | Udemy | Jan 2025
- **C++ Programming - Beginner to Advance, Deep Dive in C++** | Udemy | Dec 2024
